0. Pedestrians are invisible in planning
1. Public life is changing
2. Four scenarios
3. Five cities

GEHL ARCHITECTS
URBAN QUALITY CONSULTANTS

O. Pedestrians are **invisible** in the planning process

Lots of data on vehicular traffic

- Always Traffic Departments with data about vehicular traffic
- constantly new models, marketing, high speed, noise, pollution, organisations etc.

No data on pedestrians

- same old model, no marketing, low speed, small size, no pollution, usually no organisations etc
- **No city department for Public Life**

Data is key - Making People Visible in Planning

Public Space - Public Life surveys

Many of the reports can be downloaded as PDF-files on our website

2. Walking in St. Louis Union Station without shoes or shirt.

In order to provide a safe, secure and pleasant environment for our guests, St. Louis Union Station asks for your cooperation in complying with the rules of conduct to be followed by all patrons.

6. The playing of radios or musical instruments, not part of an organization approved by St. Louis Union Station Management.

3. Use of obscene language or gestures.

9. Putting feet on benches, planters, walls, trash containers or heaters.

7. Possession/consumption of illegal substances on property.

8. Possession/consumption of alcoholic beverages except in designated areas.

10. Sitting on floors, sidewalks, grass areas or steps.

11. Literature distribution or solicitation without the written permission of St. Louis Union Station Management.

12. Use of skateboards or roller skates on St. Louis Union Station property, or bicycles in the shopping center.

13. Possession of any article defined as a weapon, whether illegal or not.

11. Literature distribution or solicitation without the written permission of St. Louis Union Station Management.

16. Any act which could result in substantial risk of physical harm to persons or property.

17. St. Louis Union Station is a smoke free environment.

18. After 6:00 p.m. children under the age of seventeen must be accompanied by a parent or responsible adult.

Violation of these rules may result in EXPULSION from St. Louis Union Station.

Growing health problems

EVERYDAY EXERCISE

With today's hectic pace, it's hard to make time for regular exercise. Exercise helps reduce jet lag and stress.

"We make decisions about our health every day."

Follow these suggestions to help keep healthy and fit:

- Take the stairs instead of the elevator or escalator.
- Park your car at the far end of the lot and walk.
- Do isometric exercises in your chair at work or while you travel.
- Do stretching exercises while standing, sitting or lying.
- Take walking tours around your neighborhood, business area and cities that you visit while traveling.

Melbourne - Australia

- turning streets into fine places to walk and stay
- new public spaces
- getting housing and students down town

Melbourne - 3.3 mill inhabitants

Block Arcade . . . part of a pattern that should stay.

The Donut

EFFECTIVE city planning has been almost unknown in Melbourne for at least 30 or 40 years.

For the ordinary Melbourne that means our city has been progressively destroyed. It no longer contains the attraction and charm it once had.

To the city retailer — ever ready to adapt to new circumstances — it means expensive expansion into the suburbs to chase the customers who no longer visit the city.

The tourist is left with the half-truth — well, quarter-truth — of a "Paris end" to Collins Street, and the reality of just another little Chicago. And that could be unfair, because Chicago is a relatively attractive city.

Property developers and investors, who are mainly the large insurance groups and banks, have simply fulfilled their obligations to their shareholders to make bigger and better profits.

As a result, the city has reaped more rates, which increase at a similar ratio to the size of each new building.

So our planning body, Melbourne City Council, is also a beneficiary of its laissez-faire approach to new development.

An empty, useless city centre

ARCHITECTURE Norman Day

city, empty and useless except during office hours.

Our planners lack the courage to bring the city back to life.

Last week American architect Jaquelin Robertson spoke about his experiences as city planner for New York City.

His problems were like ours, only magnified by the size of that biggest apple, but there the comparison ends. His department actually instigated creative

Mr. Robertson spoke of bonuses for incorporating shopping blocks, theatres and apartment housing into new office developments.

New projects, he said, are enmeshed into the city fabric through an insistence on connecting tunnels, shopping plazas and under-street arcades to link buildings, streets and metro stations.

There are planning bonuses in New York to encourage retention of historical buildings.

New buildings include mixed functions of arcades, shops, cinemas, offices and top-floor apartments, all in the city centre.

New York has had success with the creation of malls and redirection of traffic. Compare that with the dismal bitumen in Bourke Street.

Melbourne's heritage of north-south lanes and arcades — for example, the Block and the new City Square arcade — should set the pattern of future development.

Our planners should be reaffirming the notion of Melbourne as an arcaded city instead of allowing architects to allocate useless, wind-swept forecourts "for the public use".

Having almost succeeded in castrating the Strategy Plan, we should not pin too many hopes on the existing system. The lessons from New York

1.3 AN INCREASING STUDENT POPULATION

37,5%
MORE STUDENTS
IN THE MELBOURNE CITY AREA
1993-2003

Universities and other educational institutions contribute to an active, lively urban environment by creating a people climate oriented towards young people. Students make a major contribution to the city's vitality and cultural diversity, providing a youthful stimulus and international perspective. They also tend to engage more overtly with the street scene and other public spaces because they are more available to spend time out of doors, and in so doing make a strong contribution to the local economy.

Melbourne has expanded the number of educational institutions in the city centre over the past decade, in most cases integrating these facilities into the city fabric.

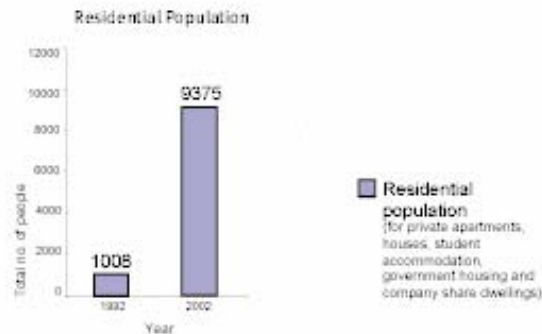

Wider Melbourne has NN educational institutions, of which XX are located within YYkm radius of the city centre. The number of students attending academic institutions and/or living in the city centre has expanded by 22% since 1993 – yielding Q,000 residents in 2003.

Student housing is mostly located outside the central city, but some student apartments are located in the city centre. Student populations are expected to continue to rise as the number of student places at Melbourne's universities and institutes increases, and is supported by growth in inner city low-cost housing.

Traditional university towns throughout the UK, Europe and the US have long demonstrated that the presence of major research institutions in the city is a huge advantage in bringing technology, talent and tolerance to the local community. More recently, Richard Florida argues that an increased student population is a vital part of the creative/knowledge city, where high concentrations of creative people results in a high concentration of creative economic outcomes.⁷

⁷Florida (2003) *The Rise of the Creative Class*: 218

1.2 A LARGER RESIDENTIAL COMMUNITY

830%
MORE RESIDENTS 1992-2002
&
3311%
MORE APARTMENTS 1982-2002

A substantial increase in Melbourne's residential population has been generated in a short span of time. The result of a well-organised strategic initiative, *Postcode 3000*, this is arguably the most impressive achievement within the last 10 years, and has been highly influential in creating a more lively and safer 24 hour city.

Residential occupation has increased from approximately 760 dwellings in 1992 to over 9900 in 2002. Notably, this growth has occurred throughout the central city rather than being confined to one or two specific areas.

Postcode 3000 encouraged residential living back into the city by converting a large amount of available empty space in the city's older, unoccupied building fabric into new models of apartment-living, and subdividing vertically into multiple, individually-owned units. The program focused on retaining and recycling Melbourne's historic buildings and the widest possible range of built forms to assist in preserving local character.

Specific measures to attract more residents have been:

- offering apartments at prices comparable to suburban areas;
- adding structures on top of existing buildings, whether these are maintained as commercial premises or adapted to residential uses; and
- converting redundant buildings to residential purposes and other mixed uses.

Today the central city residential apartment market, initially stimulated by various economic incentives, now has its own impetus driven by demand. In economic terms, the follow-on effects of this residential growth include new street use patterns and local participation as the new local community utilises the central city as its recreational base.
